

26775 SE Hwy 224
Eagle Creek, OR
888.443.6390
971.258.2589

UI/Display Update procedure:

Network Cable: M12 to RJ45 coded 4-pin

Insert usb thumb drive...Hold the top two buttons on the upper left of the screen and set ignition to "on".

Webvisu (Remote access/control) setup and use

Program router LAN to 192.168.135.1 through 10

Your wireless router has been pre-configured at the CurbDog Equipment headquarters. Network Login Info is:

Network Name: Curbmachine
Network Pwd: Curbdog01
Router User Name: admin
Router Pwd: Curbdog01
Router Device Webpage IP: 192.168.135.1

1. Ensure that the network cable from the display and the power cable to the wireless router have been connected.
2. Open the "Wireless Network" quick access on your phone or tablet
3. Look for and connect to the "Curbmachine" wireless network. You will get an error message stating that this network is not connected to the internet...Allow the connection anyway
4. Open your web browser and enter the following address:

192.168.135.6:8080/webvisu.htm

Once connected, it is recommended that you create a shortcut on your devices home screen

Please be sure that "Auto-rotate" is turned on or that you have your phone in "Landscape View".

I prefer to set my device to "Auto-Rotate"

5. The screen from your TopCon display should immediately appear on your phone or tablet. Any phone or tablet that supports HTML web browsing will work

Please note that upon first turning on the machine, it will take approximately 3 minutes for the "Curbmachine" wireless network to become visible and available for connection

The Concrete Choice in Curbing Machines
